κάδος

Lexicalia / Containers

var.dim. κάδιον
lat. cadus

Definition

Names of vessels used in the Greek and Roman world primarily to store and transport wine, as well as to draw water from the well. The sources mention κάδος / cadus also in connection with other contents such as foodstuffs, sauces and ointments, or as a ‘basin’ in the context of the bath. Finally, the κάδος also represents a measure of capacity for liquids. The word is attested in Greek medical literature only with the meaning ‘bucket’ or ‘basin’ for water, but a κάδιον containing salve appears in a papyrus from the Roman period.

A. Linguistic section
1. Etymology

The Semitic origin of the Greek noun κάδος, passed as a loanword into Latin in the second half of the third century BCE, is generally admitted by modern etymological dictionaries. The root of the word is kd/kad of the northwest Semitic dialects (Ugaritic, Hebrew, Aramaic, Phoenician). In all likelihood the term was transmitted to the Greek

2 Cf. BOISACQ, DELG 389 s.v.; CHANTRAINE, DELG I 478 s.v.; FRISK, GEW I 752 s.v.; BEEKES, EDG I 614 s.v.; ERNOUT-MEILLET, DELL 82 s.v.; WALDE-HOFMANN, LEW 128 s.v. See also ThGL IV 753C s.v.
3 On the etymological history of the term, see especially ASPESI 1983, 51-7.
through Phoenician merchants, who exported the container – object and word – with its content, the Phoenician wine.\(^4\)

Ancient Greek grammarians (par etymologically) connected κάδος with the verb χαδώ, aorist root of χανδάνω «contain» (LSJ\(^9\) 1976 s.v.).\(^5\)

2. General linguistic commentary

The only forms derived from κάδος in passages of medical context (or related to medical contents) are the diminutives καδίσκος (\(^3\)), attested in Greek literature and inscriptions starting from the fifth century BCE, and κάδιον (\(^5\)), which has the oldest attestations in papyri and inscriptions dating back to the middle of the third century BCE.\(^6\)

The word lives on in the vocabulary of some Romance languages such as in Romanian cadă, Aragonese cado and in some southern Italian dialects, like in the Calabrese katu with the meaning of ‘bucket’.\(^7\)

The Greek term was borrowed into Coptic. The forms ⲑⲧⲟⲥ, ⲑⲣⲓⲗ, ⲑⲧ, ⲑⲓ- occur in several Coptic papyri.\(^8\)

The word was exported into Arabic (kādīs) from the Latin, not directly from Greek.\(^9\)

The lexical and functional continuity of the word in Greek is confirmed by the permanence of κάδος in modern Greek, denoting the ‘bucket’.\(^10\)

3. Abbreviation(s) in the papyri

κάδ( ): e.g. BGU XIX 2834,12; O.Sarga 126,2-4 and 210,4; P.Coll.Youtie I 54,19; SPP XX 213,5-7; P.Lond. III 1177,75.

The abbreviated form does not occur in passages of medical relevance.

B. Testimonia – a selection of representative sources

1. Plin. Nat. XIV 77, 1-7 (1 CE)

Apud Graecos cura clarissimum nomen accept quod appellaverunt bion, ad plurimos valitudinum usus excoigitatum, ut docebimus in parte medicinae. fit autem hoc modo: uvae paulum ante

\(^4\) For further details and bibliographical references, see BONATI 2013 s.v. 2[2].

\(^5\) Cf. e.g. Orion κ 89, 23-6 Sturz s.v. κάδος· σκεύος τι, παρά το χαδό όντα περισσωμενον. ἀπὸ δὲ τοῦ χαδῶ γίνεται ὁ μέλλων χαδήσω, και διπλασιασμός ἐκάδησω (I. κεχαδήσω), όνομα όνομα κατορνικόν κάδος, και τροπὴ τοῦ χαδῶ σεικόν κάδος καὶ κάδος, τὸ χωρητικὸν ἀγγείον. On the forms of the word in Greek and Latin sources in general, such as graphic variants and compounds, see BONATI 2013 s.v. 2[1].

\(^9\) Cf. DIMITRAKOS, ΜΛ Β 3498 and ΝΑ 717 s.vv.; STAMATAKOS, ΑΝΕΓ II 1490-1 s.vv.; BABINIOTIS, ΑΝΕΓ 798 s.vv. For the meaning of κάδος / κάδιν as ‘pail’ for water in Byzantine sources see KOUKOULÈS 1948, 110. Even a neuter form κάδι (κάδιον) is recorded by the dictionaries.
maturitatem decerptae siccantur acri sole, ter die versatae per triduum, quarto exprimuntur, dein in cadis sole inveterantur.

Among the Greeks, the wine called “bion” has justly received the most distinguished name, having been devised for the treatment of several maladies, as we shall illustrate in the part [of this work] about medicine. It is made in the following way: the grapes are plucked a little before they are ripe and are dried in scorching sun, being turned three times a day for three days, and on the fourth day they are pressed and then left in jars to mature in the sun.

2. *Id.* XXXII 89, 2-4
Ad parotidas utuntur [...] testis cadi salsamentarii tuis cum axungia vetere.

For parotid swellings sherd of earthenware for the storage of salt fish are used, smeared with stale axle-grease.

ἔξεστι δὲ σοί πείρας ἑνεκε τοῦ λελεγμένου καδίσκον τινὰ χλιαροῦ μετρίως ὑδατος, ἐπειδὴ ἢκανὸς ἢ ἡ τεθερμασμένος ἢς, λουόμενος εἰσενέχθηκαι κελεύσαντι και θείναι τὰς χεῖρας ἢ τοὺς πόδας εἰς αὐτό, φανεῖται γὰρ σοι τὸ ὑδαρ οὐ χλιαρὸν, ἀλλ’ ἢκανὸς ψυχρόν. εἰ δὲ εὐθὺς εἰσελθὼν εἰς τὸ βαλανεῖον ἀπτοῖο τοῦ κατὰ τὸν καδίσκον ὑδατος, ἦττόν σοι φανεῖται ψυχρόν.

It is possible to you, in order to test what has been said, to request a small basin of moderately warm water after you have already warmed yourself up sufficiently in a bath, and to put your hands or your feet into it. In this case, it will seem to you that the water is not warm, but rather cold. But if you touch the water in the small basin as soon as you enter the bath, you will have the impression that the water is less cold.

<δε> δὲ και τοῖς γυμνασίοις ἐκείνοις (seil. τὴν τιτθὴν) διαπονεῖν τὸν ὄγκον, οἷς δύναται μὲν σαλευθῆναι πάντα τὰ μέρη, ἐπὶ πλείον δὲ τὰ περὶ τὰς χεῖρας καὶ τοὺς ὠμοὺς [...] ἐκ δὲ τού<των> ἐστίν [...] καὶ ἀνυμᾶν κάδον καὶ τὸ πτίσσειν καὶ ἀλήθειν καὶ σιτοποιεῖν καὶ στρωννύναι κοίτην καὶ ὡς κατ’ ἐπίκυψιν ποσὴν ἐπιτελεῖται τοῦ σώματος.

The nurse should exercise her body with those workouts which train all the parts, especially the ones around the arms and the shoulders [...]. These include [...] to draw up the bucket, to winnow and grind the grain, to make bread, to spread the bed and what is made for a certain bending forward of the body.

καδίον μοι 1 πέμψατε κο[λ]ομίου (l. κολλομίου)
Send me a small jar of salve.

πονεῖτω δ' ἡ τιτθὴ ἀπὸ τῶν χειρῶν καὶ τῶν ὁμών, εἰ μέλλει τι τὸ παιδίον ὥφελείν. [...] ἀρκεῖ δὲ που καὶ ἀνιμῆσαι κάδω καὶ σφαίραν βαλεῖν κτλ.

The nurse should take exercise training arms and shoulders if she is destined to mind a young child. [...] It is sufficient that she draws water up with the bucket, throws the ball etc.

7. Id. Eun. I 1, 2,2 (CMG VI 3, 320, 2-5 Raeder)
τῷ νεογενεί παιδίῳ κατ' ἀρχὰς ἡ τροφὸς διαιτάσθω, πόνοις τε καὶ σιτίοις τοῖς ἀρμόττουσιν εὐγαλακτοτάτην ἑαυτὴν παρασκευάζουσα. πονεῖτω μὲν οὖν εἰς τοὺς ἐναντίους τόπους βαδίζουσα καὶ υφαίνουσα καὶ πτίσσουσα καὶ κάδῳ ἱμῶσα.

The nurse should live with the newborn baby in the beginning, and prepare her own body to produce the best milk with proper exercises and food. So, she has to work out walking in ascending places, and weaving and winnowing grain and drawing water up with the bucket.

C. Commentary

1. κάδος and its medical sources

The noun κάδος is attested in Greek literature from the seventh century BCE (Archilochus, etc.). The primary function of the vessel is that of vas vinarius. The other main meaning of κάδος, as ‘bucket’ for drawing water up from the well, surfaces in the sources as early as the fifth century BCE. The earliest occurrences of the loanword cadus in Latin date back to the second half of the third century BCE (Plautus), where it denotes the ‘wine-jar’. A wide range of products (such as fruit, must, vegetables, oil, salt fish) stored in cadi, are mentioned in the Naturalis Historia of Pliny the Elder.\footnote{For references and further functions of the κάδος in Greek and Latin literary sources, see BONATI 2013 s.v. 1[1].}

In medical writers and other passages of medical content, the κάδος has its common meaning, a container for water or wine, never a container of medicamenta. It does not therefore represent a technical term. The only genuine medical use of the word and related container is represented by the κάδιον [5]. The female author of the letter, Thaisarion, asks her brothers and her sister Serapous to send her a kadion («small jar»?) of salve: it is in fact the only attestation where a container so named is destined for a medicament.

The other usages of the κάδος / cadus in texts related to medical topics are peripheral. In [4], [6] and [7], passages concerning the healthy lifestyle of a nurse, drawing water up with the κάδος (‘bucket’) is one of the exercises recommended to train the body of the nurse, strengthening the muscles of her arms and shoulders. Galen ([3]) mentions the object when he proposes an experiment – to pour moderately warm water in a
κάδίσκος, i.e. a ‘small basin’ – illustrative of how the perception of the temperature of a liquid changes when the body comes into contact with another, warmer or colder, liquid. In [1] the cadi are simple storage containers used to hold the dried grapes during the preparation of a medicinal wine, whereas in [2], a passage dealing with the therapeutic properties of some types of fish and of products prepared with fish, it is recommended to apply broken pieces of a cadus salsamentarius, i.e. previously used to salt fish and therefore still soaked with residues of its prime-use content, onto a swollen parotid gland. This is a case of reuse of the cadus for a medical purpose.\footnote{The topic of the reuse of storage containers is discussed in detail by PEÑA 2007, 61-192.}

2. κάδος: the word and the object

The passages of medical content (see [B]) do not provide information about the physical appearance of the vessel.

Dimensions and other features

A wide range of dimensions is attested in other sources,\footnote{Cf. e.g. P.Hamb. I 10,35 (II CE, Theadelphia) κ[α]διον μέγαν and P.Tebt. II 406,23 (ca. 226 CE) κάδος μικρός. But the κάδοι mentioned by Philippid. fr. 28, 4 K.A. (ap. Athen. Epit. 781f) are bigger than a man (κάδοι μείκους ἐμου), with comic exaggeration.} probably depending on the use of the object. The κάδος is also described as «round», «globular» (στρογγύλος in Men. fr. 229 K.-A.), as well as «hollow» (κοιλός in Archil. fr. 4, 7 W.\footnote{Further details on the features of the κάδος in Greek and Latin written sources in BONATI 2013 s.v. 4.}). These descriptions point to a broad-bellied, roundish vessel.\footnote{For this aspect see BONATI 2013 s.v. 4 with references. For example WHITE 1975, 128 states that «it seems clear from the evidence that the term cadus, like its parent κάδος, was used with an extremely wide range of meanings, both general and specific».} The vessel can be closed by a lid (cf. Archil. fr. 4, 7 W.\footnote{The juxtaposition of κάδοι / κάδα with terms denoting ointment vessels (μυροθήκη, λήκυθος and ύδόικιον) in some papyri containing lists of paraphernal goods (cf. P.Oxy. VII 1026,20-1 [V CE]; P.Strasb. IV 237r,16-7 [142 CE, Ptolemais Euergetis]; SPP XX 46,17 [II-III CE, ?]; SPP IV pag. 115-6,10-2 [169-176 CE, Oxyrhynchus]) might suggest miniature jars for unguents and cosmetics also in these cases. See BONATI 2013 s.v. 1[2] and 4. For an overview of the main types of ointment vessels, cf. İŞIN 2002, 85-96.} or by cork (cf. Plin. Nat. Hist. XVI 34, 3-5) and be furnished with handles (see [Anticl.] FGrHist 140 F22 = Autocl. FGrHist 353 F*1 (ap. Athen. XI 473b-c) καδίσκον καινόν διώτον ἐπιθηματοῦντα).

Shape

The analysis of the written sources suggests that the noun was not applied to a specific form of vessel but was employed with a generic-functional value, so that it may have referred to a wide range of containers.\footnote{But the κάδοι mentioned by Philippid. fr. 28, 4 K.A. (ap. Athen. Epit. 781f) are bigger than a man (κάδοι μείκους ἐμου), with comic exaggeration.} As a consequence, the shape of the object is not always clearly identifiable.

In the particular case of [5], which testifies the only genuine medical use of the κάδιον, the shape might be supposed similar to the miniature ointment jars yielded by the excavations,\footnote{But the κάδοι mentioned by Philippid. fr. 28, 4 K.A. (ap. Athen. Epit. 781f) are bigger than a man (κάδοι μείκους ἐμου), with comic exaggeration.} which are sometimes fairly wide-mouthed and roughly resembling a small
version of the ceramic ‘pail’,\(^{17}\) such as when the κάδιον /cadus is mentioned as a container for μύρον (cf. Nic. Chon. Hist. 306, 1-2 von Dieten) and balsama (cf. Claud. Carm. min. XXV 121-2 [MGH X 306 Birt]).

The other containers called κάδος / cadus in [B] are to be traced back to different categories of vases. The general shape of ‘buckets’ used for drawing water from the well (see [4], [6] and [7]), which may be justifiably named κάδοι, can be identified with confidence.\(^{18}\) The variations (e.g. taller or fatter specimens) do not imply a difference of shape. In general, these ‘pails’ tend to be broad-bellied and wide-mouthed, with or without a small distinct foot and a sharply spreading lip. They could be of metal, especially bronze, with a metal bail handle,\(^{19}\) whereas their clay counterpart was smaller and furnished with two ear-like vertical handles set on the shoulder.\(^{20}\)

The κάδος / cadus used as a ‘storage vessel’ (see [1] and [2]) seems to be connected with the (functional category of the) amphi\-\/orae both for its use and for its general appearance,\(^{\text{21}}\) i.e. a certain range of medium-sized vessels for the storage, the transport and the commercialization of wine and other products.\(^{22}\) The impression is that κάδος / cadus corresponds to the more broad-necked among the amphi\-\/orae.\(^{23}\)
